

Liutane or Propane

- Found in aerosol products.
- May be narcotic and cause asphyxiation

Polyethylene Glycol (PEG)

- Carcinogenic petroleum ingredient that reduces the skin's natural moisture.
- Increases the appearance of aging and leaves you vulnerable to bacteria.
- Used in spray-on oven cleaners and cleansers to dissolve oil and grease.

Mineral Oil

- Petroleum by-product that coats the skin like plastic wrap, clogging the pores.
- Interferes with skin's ability to eliminate toxins, promoting acne and other disorders.
- Slows down skin function and cell development, resulting in premature aging.

Baby oil is 100% mineral oil!

Alcohol Isopropyl (SD-40)

- Drying, irritating solvent that strips skin's moisture and immune barrier, making you vulnerable to bacteria and viruses.
- Made from a petroleum derivative found in shellac and antifreeze as well as personal care products.
- Promotes brown spots and premature aging.

A Consumer's Dictionary of Cosmetic Ingredients says it may cause headaches, flushing, dizziness, mental depression, nausea, vomiting, and coma.

Fatal ingested dose is one ounce or less.

Fragrances

- Can contain up to four thousand ingredients (including animal urine), many toxic or carcinogenic.
- Causes headaches, dizziness, allergic rashes, skin discoloration, violent coughing, vomiting, and skin irritation.
- Fragrances affect the nervous system, causing depression, hyper activity, irritability, inability to cope, and other behavioral changes

FD&C Color Pigments

- Synthetic colors from coal tar that deposits toxins onto the skin, causing skin irritation.
- Absorption of certain colors can cause depletion of oxygen in the body and death.
- Animal studies have shown almost all of them to be carcinogenic.
